Custom software solution

Pipeline Advisor is a proven, easy-to-use, customizable software solution designed to maximize the effectiveness and profitability of even the most complex slurry or tailings pipeline system. With continuous monitoring, our clients can reduce operator error and downtime, and achieve safe, energy and cost-efficient pipeline operations.

Real-time monitoring

Fortunately, Ausenco PSI recognizes the need to monitor all aspects of pipeline operations around-the-clock. Our solution is Pipeline Advisor, a dedicated software program that can manage minute-by-minute operations to achieve safe, energy-efficient operation.

User-friendly interface

The technology behind Pipeline Advisor has been proven in the field to be both effective and easy to navigate. Since it was created by Ausenco PSI, it is also customizable, which means our engineers can add or modify features to satisfy our client's unique operational needs. Naturally, foreign language support is also available.
